

PROJECT: 8704
 DATE: 27 FEB 87
 SESSION: 02
 SOURCE: 021

START: 1013
 SANCTUARY: - -
 TARGET: 1020
 FINISH: _____

SG1A

COORDINATE: [REDACTED]

FRONTLOAD:

"This will be the same site as yesterday. Initial Review indicates a high probability that you were successful in acquiring the site. Today we will return and continue to identify the major gestalts of the site. When I am satisfied that you ~~are~~ ^{are} ready we will begin describing the insides of the various structures as well as ~~their~~ their purpose"

* "Some difficulty getting office out of (her) mind"
 (Conversations with Fern) ??!!

** Some sporadic heater noises.

NOTES:

- ① No known or stated inclemencies
- ② Cloudy, weather changing - chilly moving toward sleet/rain
- ③ It's Friday
- ④ 2nd day in ~~the~~ A row for same source

DRAFT: _____

TYPING: _____

PROOF: _____

CORRECT: _____

OPS: _____

SG1A

(1024)

★ FEELING OF BEING IN A LARGE VEHICLE, LIKE A LIMOUSINE, IMPORTANT PEOPLE - ATTENTION HAS BEEN DRAWN BACK TO PIPE LIKE AREA

→ STAY IN THAT AREA THEN

★ HEAVY PRESSURE FEELING, (DEEP SIGH), FEEL LIKE I'M BEING PULLED, GRAVITATIONAL FORCES PULLING ME AWAY,

→ DESCRIBE THE PIPE LIKE AREA

★ ITS A STRUCTURE, ITS ROUNDED LIKE HALF A SPHERE, RADIATING GLOW, AROUND IT, BARRAGE LIKE AFFECT, WAVY, TRANSPARENT, VERY WARM, VERY HOT, GIVING OFF HEAT RAYS, THERE IS A GLOW TO IT, PULSING, ~~THROBING~~ THROBING

→ CONTINUE TO DESCRIBE THIS AREA

★ THE ~~SOIL~~ IMMEDIATELY SURROUNDING THIS THING IS VERY PATCHED, AOL LIKE PORES IN A PIECE OF STYROFOAM, TUBES OR PIPES ARE VERY COLD ALMOST IF I PUT MY BARESKIN AGAINST THEM IT WOULD STICK,

→ CONTINUE TO FOCUS AROUND THIS OBJECT

★ PIPE LIKE THINGS SEEM TO BE DRAWING SOURCE FROM EARTH, MATERIAL, MAN-MADE MATERIAL BUT DRAWING NATURAL SUBSTANCE FROM SOIL - SALTY TASTE, NOT LIKE SALT WATER, ITS MORE PURE, SHARPER TASTE, THERE ARE LINES ON THIS HALFS-SPHERE CREATING A PATTERN, BECAUSE OF THIS THEY CONVERGE AT THE TOP AND ARE SMALLER - LIKE SOMETHING STRETCHED OVER A STEEL LIKE A SKIN - THERE IS CLEAR WATER OR SOMETHING ^{catching heat &} REFLECTING ~~THE~~ HEAT BACK ON TO THE TUBES, REFLECTING, VERY WELL Laid OUT,

3

→ STAY WITH THIS OBJECT - FOCUS INSIDE

★ THERE IS A HISSING SOUND LIKE STEAM, LIKE A STEAM ROOM, A HEAVY SMELL OF SULPHUR

→ CONTINUE TO DESCRIBE THE INSIDE

★ I HAVE TO COME DOWN AND TAKE A BREAK - (COMFORT BREAK)' (1039)

→ CONTINUE TO DESCRIBE INSIDE THE HALF-SPHERE (1042)

★ STRANGE THING IN CENTER LIKE A HALF CIRCLE - ITS A ... LIKE A WELL - I LOOKED DOWN AND IT LOOKED LIKE A BLACK BOTTOMLESS PIT - LIKE A VACUUM - IT "SUCKS OUT THE AIR WITHIN THIS THING - THE AREA SEEMS TO BE FILLED WITH A MISTY, CLOUDY GAS

→ DESCRIBE THE SMELLS

★ OZONE, LIKE OZONE, DAMP, MOULDY, EARTHY, MIXED WITH CRISP COOL ALMOST A SWEETNESS - PASSES IN WAVES, LIKE CIRCULATING WAVES, VERY LIGHT HEADED ALMOST - EUPHORIC,

→ CONTINUE TO DESCRIBE THE INSIDE

★ COLDNESS, PENETRATING COLD, A SHIFTING AN IMAGE TO AN UPSIDE DOWN MUSHROOM, HOLLOW, UGRY THICK WALLS, I THEN GET A FEELING OF SUCKING ON A STRAW, LIKE PUTTING YOUR FINGER ON THE ~~the~~ end and sucking and then releasing, like an overflow tank - INSIDE THERE ARE SEMI-CIRCLES - HALF CIRCLES, SPHERES

→ TELL ME ABOUT THESE SPHERES

4

- ★ They are like coils on a refrigerator, banded very close together very close to the ground - like you would set up a building that you didn't intend people to inhabit, more for testing something; researching something -
- Focus on The Well
- ★ Feeling of Heat coming from it, a red glow,
- Tell me about This heat
- ★ Its like a natural heat, like a cap or core of a volcano, with something built over the top, again a very heavy ~~set~~ mineral, sulphur like smell, There crushing pressure in here, like all the air has been sucked out
- Describe your location
- ★ Inside The sphere, same pressure
- Focus Inside The Well
- ★ Seems to be a lining of some type, very hard substance, Smooth, Brushed like Brushed stainless steel,
- Continue to Focus Inside - Continue to enter the Well
- ★ As you go down it branches off, its very deep - two directions, as though one drains something off while one direction lets something in - A flow feeling as if In goes bad air out goes BAD air
- Continue Down
- ★ Further Down you go the more strong the odors - mixture of strong sulphur and pronounced sweet, cool, tasteless odorless Type air

5

- Describe your location now
- ★ Still in the well - a buoyant or bobbing feeling, not a wiggle but up and down as though being buffeted about like a ball in an air tube - This AOE - got Blown out of it
- Describe Blown out
- ★ Back out of it like a pop -
- Remain in the sphere - continue to describe
- ★ a coating of like dry ice, produced by atmosphere but also a necessary functional part - oh (sigh) --
- Describe the functions of this sphere
- ★ (sigh, sigh) Isolation, attempting to separate, isolate, making a product, making something, like a centrifuge it separates different properties of gassy substance, very controlled,
- Comfort Break (11:02) -
(END) (Sessions)

Site was large sphere in open area. Sphere was a very intense white and there were bridge like bands of air surrounding it. There was a pattern of intersecting lines around the circumference and perpendicular to the ground, converging at the top.

Inside the sphere there was a very distinctive mixture of things — sulphur & mineral, damp and sweet & clean, strong. They would give an ozone like circulation. There were band-like pipes, low to the ground. Around the circumference, with a building of solid moisture, not like the coils of a fungus.

In the center of the sphere was a well-like opening, lined with a porous, translucent, cold material (like stainless steel). There was a pulsing red glow coming from deep inside the "well". In horizontal, there was a branch to either side (while still continuing down) but there was a feeling of movement of air from one side, up the shaft and a movement down to the other side.

Second structure was like an upside-down mushroom, hollow & thick-walled. Again, there was a feeling of pressure being applied and released like an inflating tank.

The pipe-like structures "in front" (from my perspective) were leading to the earth. No indication of connection to any man-made structure (other than sphere). It was as though they were pulling something from the soil or earth.

There was a feeling of air in the sphere as of circulation masses of clouds, wet atmosphere and pressure.

Almost 3/4 granulated full.
